

CBM has come a long way from just 2010 when I first made my account. We have grown in community, editors, reliability, and quality. Which is a good thing. Perhaps in two more years we can grow even more. But we need to YOU too keep growing in users and quality. Josh Wilding has recently made an excellent contribution to the CBM: 101 features, find that [HERE](#). But today I'm showing something a little different. If you're interested in posting an article or just posting in the comments this will be some things you need to learn. For this lesson lets see how to use HTML to make better looking articles. Lets start with some simple things, like some of what I used to make the text on this article look more professional. HTML Font Code: `<font size=4>Insert Text Here</font>` Results: Size Four Font There is actually two ways of making bold and italics, I'll tell you the preferred
