

One of CBM's own, Mikey Wood, has quite the eagle eye as he came across a rather fascinating science experiment that shares the same name as the working title of The Dark Knight Rises. That title and the name of the experiment is MAGNUS-REX. Magnus-Rex Seismic Experiment - October, 2007 Magnus-Rex, a new seismic refraction experiment set out to shed light on the relationship between topography and Moho depth in southern Norway and to help determine if topography is compensated by crustal thickness. The project is the refraction component of MAGNUS, (Mantle investigations of Norwegian uplift structure), a multidisciplinary study of the lithosphere in southern Norway. - MAGNUS-REX To break that down a little bit for you, in 2007 the Copenhagen University, Oslo University, Bergen University and the Norwegian Geological Survey conducted an experiment related to seismic activity. As you will read below, the experiment required setting off a series of small explosions set along
