

The latest image from the official Logan Instagram account, WponX, is an intriguing one. The black and white image features what appears to be the side of a bathroom stall, with the question "Where are all the mutants?" scrawled on the side. This is certainly interesting, seeing as the end of Days of Future Past showed Wolverine effectively saving the mutant race from being wiped out at the hands of Sentinels. Given that Logan takes place well after the events of that film, is it possible that the Mutant race has begun to naturally go extinct? Or could it be that Donald Pierce and his Reavers have succeeded in eliminating a good amount of them? Let us know what you think below. Logan is set for release on March 3rd, 2017.
