

Doctor Strange went through several different looks during the design process before his feature film debut, though from the looks of it, his arch-nemesis Dormammu was the most difficult to render when it came to his live-action appearance. We've covered several pieces of concept art from various artists in the past, most of which attempted to pay homage to the character's look in the comics. However, some new pieces from artist Jerad Merantz may be just be the most "strange" designs yet. Merantz revealed the designs on his ArtStation profile, most of which depict a crumbling, statuesque design for the dreaded villain. It's clear that Marvel allowed their artist's imaginations to run wild for this film! What do you think of these designs? Do you prefer them to what we got in the finished film? Let us know in the comments!
