

The last we heard regarding the big-screen adaptation of Marvel's Sorcerer Supreme, Doctor Strange, was that it would come "Sooner Rather Than Later," according producer Kevin Feige. And now, thanks to the keen eyes of SHH forum user BoredGuy, via lo9, a theoretical physicist, Sean Carroll, who worked with Marvel Studios on last summer's Thor has revealed further progress on the long-productive project. Check out an excerpt below. Now that Carroll's done with Thor, he's moved on to Doctor Strange, about a surgeon who becomes earth's Sorcerer Supreme. Carroll's job is to apply limits to Strange's powers. "You need constraints to provide tension," he says. A world where anything can happen makes for a very boring movie. It's when science imposes boundaries on what a superhero can do that the real drama begins. Although this isn't much, considering we learned August last year that the screenwriters attached to Strange, Thomas Donnelly & Joshua
